

## Product Identification Information

**Title:** *The United States is Not Ready for Cyber Attack*

**Date Evaluated:** 14 March 2017

**DNI Evaluator #:** DNI-009

### Scores Awarded:

|                                                                                                                           |          |
|---------------------------------------------------------------------------------------------------------------------------|----------|
| Literal Response Criterion 1: Properly describes quality and credibility of underlying sources, data, and methodologies.  | <u>1</u> |
| Literal Response Criterion 2: Demonstrates customer relevance and addresses implications.                                 | <u>3</u> |
| Inferential Response Criterion 1: Properly distinguishes between factual reporting and assumptions and judgments.         | <u>1</u> |
| Inferential Response Criterion 2: Properly expresses and explains uncertainties associated with major analytic judgments. | <u>1</u> |
| Evaluative Response Criterion 1: Uses clear and logical argumentation.                                                    | <u>2</u> |
| Evaluative Response Criterion 2: Incorporates analysis of alternatives.                                                   | <u>2</u> |

**Comments:** *Overall solid product; greatest strength is its relevance.*

## A. Literal Response Criteria

Solvers' submissions against the Literal Response Criteria will be scored as the arithmetic sum of the scores for Criteria 1 and 2, as outlined below. AIS will make the ultimate determination of the winner for the Literal award category.

### Literal Response Criterion 1: Properly describes quality and credibility of underlying sources, data, and methodologies.

**Background:** Solvers' submissions should accurately characterize the information in the underlying sources and explain which information proved key to analytic judgments and why. Factors significantly affecting the weighting that the analysis gives to available, relevant information, such as denial and deception, source access, source motivations and bias, or age and continued currency of information, or other factors affecting the quality and potential reliability of the information, should be included in the product.

| <input type="checkbox"/> Poor (0)                                                                                                                                                                                               | <input type="checkbox"/> Fair (1)                                                                                                                                                                                                                                                               | <input type="checkbox"/> Good (2)                                                                                                                                                                                                                                                            | <input type="checkbox"/> Excellent (3)                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> Largely lacks sourcing or describes reporting base, data, or methodologies only vaguely; <b>OR</b><br><input type="checkbox"/> Misidentifies or misrepresents cited reporting, data, or methodologies. | <b>X</b> <input type="checkbox"/> Contains basic, generic descriptions of cited reporting, data, or methodologies; <b>BUT</b><br><b>X</b> <input type="checkbox"/> Provides little detail on factors that may affect the quality and credibility of underlying sources, data, or methodologies. | <input type="checkbox"/> Contains at least basic, generic descriptions of cited reporting, data, or methodologies; <b>AND</b><br><input type="checkbox"/> Provides considerable detail on factors that may affect the quality and credibility of underlying sources, data, or methodologies. | <input type="checkbox"/> Satisfies "good" criteria; <b>AND</b><br><input type="checkbox"/> Identifies which sources are most important to major analytic judgments; <b>OR</b><br><input type="checkbox"/> Provides additional detail about sources, data, or methodologies that provides insight into their contribution to the analysis. |

**RATING COMMENT:** *No insight provided as to who panel of experts are, who senior leaders are, or level of NATO officials*

Note: Source reference citations should be included as endnotes in disseminated analytic products. In rating this standard, the totality of information in a product's source reference citation endnotes, source summary statement, and main text must be taken into account.

**Literal Response Criterion 2: Demonstrates customer relevance and addresses implications.**

**Background:** Solvers' submissions should provide information and insight on issues relevant to the products' intended consumers and/or provide useful context. To meet this standard fully, Solvers' submissions should examine and explicitly address direct or near-term implications of the information for the intended audience and/or for U.S. national security interests, and, when possible, also relay longer-term implications or identify potential indirect or second-order effects.

| <input type="checkbox"/> Poor (0)                                                                                                                                                               | <input type="checkbox"/> Fair (1)                                                                                                                                                                                                                                                                     | <input type="checkbox"/> Good (2)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <input type="checkbox"/> Excellent (3)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> Provides little or no information or analysis beyond what is generally known; <b>OR</b><br><input type="checkbox"/> Does not respond adequately to a specific tasking. | <input type="checkbox"/> Provides useful information and analysis but does not address implications; <b>OR</b><br><input type="checkbox"/> Does not address an important issue or question raised by the analysis; <b>OR</b><br><input type="checkbox"/> Satisfies a specific tasking only partially. | <input checked="" type="checkbox"/> Provides useful information and analysis and addresses near-term, direct, or first-order implications; <b>AND</b><br><input checked="" type="checkbox"/> Adds value by addressing at least one of the following: trends or prospects, appropriate context, insight gained from synthesizing a large volume of information, warning of threats to U.S. interests, or factors affecting opportunities for U.S. actions (without prescribing U.S. policy); <b>OR</b><br><input type="checkbox"/> Satisfies a specific tasking fully. | <input checked="" type="checkbox"/> Satisfies "good" criteria; <b>AND</b><br><input checked="" type="checkbox"/> Assesses longer-term, indirect, or second-order implications; <b>OR</b><br><input type="checkbox"/> Provides exceptionally expert analysis (e.g., by drawing on multiple disciplines or presenting illuminating comparisons); <b>OR</b><br><input type="checkbox"/> Warns of threats in detail (e.g., by discussing specific indicators, likelihood, or imminence); <b>OR</b><br><input type="checkbox"/> Analyzes in detail factors affecting opportunities for U.S. action (e.g., by discussing risks, benefits, or possible reactions to potential U.S. actions). |

**RATING COMMENT:** *Clearly addresses "so what" of lack of clarity as to who is in charge and how to deal with national/international cyber incident.*

## B. Inferential Response Criteria

Solvers' submissions against the Inferential Response Criteria will be scored as the arithmetic sum of the scores for Criteria 1 and 2, as outlined below. AIS will make the ultimate determination of the winner for the **Inferential** award category.

### Inferential Response Criterion 1: Properly distinguishes between factual reporting and assumptions and judgments.

**Background:** For the purposes of this standard, assumptions are defined as explicit or implicit hypotheses that may affect outcomes or that affect the way in which information is interpreted or weighed. They deal with identifying underlying causes and/or behavior of systems, people, organizations, states, or conditions. Assumptions comprise the foundational premises on which the information and logical argumentation build to reach analytic conclusions. Assumptions may also span information gaps that would otherwise inhibit the analysis from reaching defensible judgments. Judgments are defined as logical inferences from the available information or the results of explicit tests of hypotheses. They comprise the conclusions of the analysis.

Solvers' submissions should explicitly identify the critical assumptions on which the analysis is based and explain the implications for judgments if those assumptions are incorrect. As appropriate, Solvers' submissions should identify indicators that would signal whether assumptions or judgments are more or less likely to be correct.

| <input type="checkbox"/> Poor (0)                                                                                              | <input type="checkbox"/> Fair (1)                                                                                                                                                                                                                                                               | <input type="checkbox"/> Good (2)                                                                                                                                                                                                                                                | <input type="checkbox"/> Excellent (3)                                                                                                                                                                                                                                                             |
|--------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> Does not distinguish among statements that convey underlying information, assumptions, and judgments. | <input checked="" type="checkbox"/> Sometimes distinguishes among statements that convey underlying information, assumptions, and judgments; <i>OR</i><br><input type="checkbox"/> Does not explicitly state assumptions that serve as linchpins of an argument or bridge key information gaps. | <input type="checkbox"/> Consistently distinguishes among statements that convey underlying information, assumptions, and judgments; <i>AND</i><br><input type="checkbox"/> Explicitly states assumptions that serve as linchpins of an argument or bridge key information gaps. | <input type="checkbox"/> Satisfies "good" criteria; <i>AND</i><br><input type="checkbox"/> Identifies indicators that, if detected, could validate or refute judgments or assumptions; <i>OR</i><br><input type="checkbox"/> Explains the implications for judgments if assumptions are incorrect. |

**RATING COMMENT:** *Use of source descriptors and source reference citations good but not always clear what is a judgment, what is reporting*

**Inferential Response Criterion 2: Properly expresses and explains uncertainties associated with major analytic judgments.**

**Background:** Solvers' submissions should indicate and explain the basis for the uncertainties associated with major analytic judgments. Sources of uncertainty—including information gaps and significant contrary reporting—should be noted and linked logically and consistently to the uncertainty surrounding judgments. As appropriate, solvers' submissions also should identify indicators that would alter the levels of uncertainty for major analytic judgments.

| <input type="checkbox"/> Poor (0)                                                                                                                                                                                                                                                   | <input type="checkbox"/> Fair (1)                                                                                                                                                                                                                                                                                                                             | <input type="checkbox"/> Good (2)                                                                                                                                                                                                                                                                                 | <input type="checkbox"/> Excellent (3)                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> Does not indicate levels of uncertainty associated with major analytic judgments;<br><b>OR</b><br><input type="checkbox"/> Indicates levels of uncertainty associated with major analytic judgments that are inconsistent with the basis ascribed to them. | <input checked="" type="checkbox"/> <input type="checkbox"/> Indicates levels of uncertainty associated with major analytic judgments; <b>BUT</b><br><input type="checkbox"/> Does not explain their basis ( <i>e.g.</i> , by reference to strengths and weaknesses of the information base, contrary reporting, assumptions, or the nature of the judgment). | <input type="checkbox"/> Indicates levels of uncertainty associated with major analytic judgments; <b>AND</b><br><input type="checkbox"/> Explains their basis ( <i>e.g.</i> , by reference to strengths and weaknesses of the information base, contrary reporting, assumptions, or the nature of the judgment). | <input type="checkbox"/> Satisfies “good” criteria; <b>AND</b><br><input type="checkbox"/> Provides especially thorough discussion of nature and sources of uncertainties affecting major analytic judgments; <b>OR</b><br><input type="checkbox"/> Identifies indicators that, if detected, would alter levels of uncertainty associated with major analytic judgments. |

**RATING COMMENT:** *Almost all statements/judgments are written in declarative prose, suggesting high confidence; there is no acknowledgement of information gaps, the degree of uncertainty*

## C. Evaluative Response Criteria

Solvers' submissions against the Evaluative Response Criteria will be scored as the arithmetic sum of the scores for Criteria 1 and 2, as outlined below. AIS will make the ultimate determination of the winner for the Evaluative award category.

### Evaluative Response Criterion 1: Uses clear and logical argumentation.

**Background:** Solvers' submissions should facilitate clear understanding of the information and reasoning underlying analytic judgments. Key points should be effectively supported by information or, for more speculative warning or "think pieces," by coherent reasoning. Language and syntax should convey meaning unambiguously. Solvers' submissions should be internally consistent and acknowledge significant supporting and contrary information affecting key judgments.

| <input type="checkbox"/> Poor (0)                                                                                                                                                                                                                                                                                          | <input type="checkbox"/> Fair (1)                                                                                                                                                                                                                                                                                                                   | <input type="checkbox"/> Good (2)                                                                                                                                                                                                                                                                                                                                                                                                                          | <input type="checkbox"/> Excellent (3)                                                                                                                                                                                                                                                                                                                                            |

| <input type="checkbox"/> Lacks a main analytic message;<br><b>OR</b><br><input type="checkbox"/> Does not support analytic judgments with relevant evidence or undermines them by using flawed logic; <b>OR</b><br><input type="checkbox"/> Often uses unclear language or uses a structure that is not easily understood. | <input type="checkbox"/> Presents a main analytic message; <b>BUT</b><br><input type="checkbox"/> Does not combine evidence, context, and assumptions effectively to support analytic judgments or uses weak logic;<br><b>OR</b><br><input type="checkbox"/> Sometimes uses unclear language or a structure that at times is not easily understood. | <input checked="" type="checkbox"/> Presents a prominent and clear main analytic message;<br><b>AND</b><br><input checked="" type="checkbox"/> Presents clear reasoning with no flaws in logic and effectively combines evidence, context, and assumptions to support analytic judgments; <b>AND</b><br><input checked="" type="checkbox"/> Uses clear language and a structure that displays a logical flow appropriate for the argument being presented. | <input type="checkbox"/> Satisfies "good" criteria; <b>AND</b><br><input type="checkbox"/> Addresses any inconsistent or contrary information in a way that reconciles it with analytic judgments; <b>OR</b><br><input type="checkbox"/> Demonstrates notable skill or sophistication in combining evidence, context, and assumptions convincingly to support analytic judgments. |

**RATING COMMENT:** *Clear analytic message, generally well developed and supported*

## **Evaluative Response Criterion 2: Incorporates analysis of alternatives.**

**Background:** Analysis of alternatives is the systematic evaluation of differing hypotheses to explain events or phenomena, explore near-term outcomes, and imagine possible futures to mitigate surprise and risk. Analytic products should identify and assess plausible alternative hypotheses. This is particularly important when major judgments must contend with significant uncertainties, or complexity (e.g., forecasting future trends), or when low probability events could produce high-impact results. In discussing alternatives, products should address factors such as associated assumptions, likelihood, or implications related to U.S. interests. Products also should identify indicators that, if detected, would affect the likelihood of identified alternatives.
